'NUCLEARWINTER' COMES TO SYDNEY

Talk and media availability by Professor Alan Robock of Rutgers University, 5-6.30pm, Fri25Jan, Center for Peace and Conflict Studies, Mackie Building, Opp. Footbridge Theater, Arundel Street Glebe, (off Parramatta Road). Rm114 and Poster Gallery.

Professor Alan Robock is possibly the worlds foremost expert on 'Nuclear Winter', the result of the large-scale use of nuclear weapons against cities in particular.

Professor Robock was one of those who performed the original research on the subject in the 1980's, when it was credited with persuading even Ronald Reagan that nuclear war 'cannot be won and must never be fought'.

Professor Robock, together with Brian Toon, did the 'nuclear winter' computer simulations over again in 2006 with the latest NASA climate models and concluded that it was likely to be even more catastrophic than thought in the 1980's.

Professor Robock's latest publication, in the prestigious Bulletin of the Atomic Scientists, is 'Self Assured Destruction'.

Prof. Robock has been in Australia for the IPCC meetings in Hobart.

The talk at Center for Peace and Conflict Studies is his ONLY public appearance while he is here.

He will be available for media just before and immediately after the talk at CPACS, 5-6.30.
